MOUNTING INTERFACE

PERFORMANCES

(obtained with mineral oil with viscosity of 36 cSt at 5	0°C and electronic contr	ol card)	units to
Pressure allowed on P port	bar	bar 30 ÷ 100 bar 0 ÷ 30 bar 23 see ∆p-Q diagram	
Pressure allowed on T port (see par. 3)	bar		
Controlled pressure	bar		
Minimum controlled pressure	see Δp		
Maximum flow	l/min		15
Step response	see p	see paragraph 4	
Hysteresis (with PWM 200 Hz)	% of p nom	<	4%
Repeatability	% of p nom	< :	±1%
Electrical characteristic	see paragraph 3		
Ambient temperature range	°C	-20	/ +50
Fluid temperature range	°C	-20	/ +80
Fluid viscosity range	cSt	10	÷ 400
Fluid contamination degree	According to ISO 4406:1999 class 18/16/13		
Recommended viscosity	cSt		25
Mass: single solenoid valve double solenoid valve	kg		1,6 2

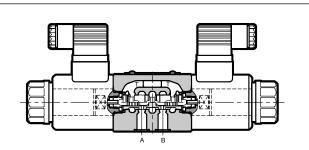

ZDE3 DIRECT OPERATED PRESSURE REDUCING VALVE WITH ELECTRIC **PROPORTIONAL CONTROL SERIES 30**

SUBPLATE MOUNTING ISO 4401-03

p max 100 bar

Q max 15 l/min

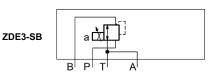

OPERATING PRINCIPLE

- ZDE3 valves are direct operated pressure reducing valves with electric proportional control, with mounting interface in compliance with ISO 4401 standards.
- These valves are used to reduce pressure in the secondary circuit branches thus ensuring stability of controlled pressure in the event of variations of the flow rate through the valve.
- The valve can be controlled directly by a current control supply unit or by means of the relative electronic control units to exploit valve performance to the full (see par. 10).

HYDRAULIC SYMBOLS

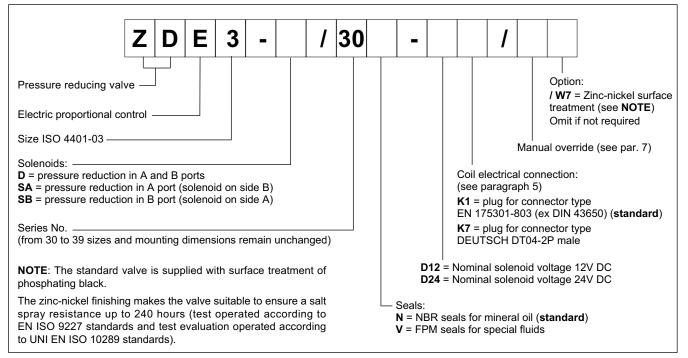

аÈ Шть ZDE3-D в Α Ьь ZDE3-SA В Α PT

81 510/217 ED

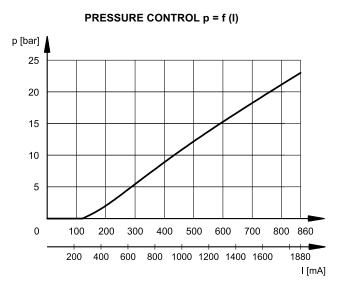

1 - IDENTIFICATION CODE

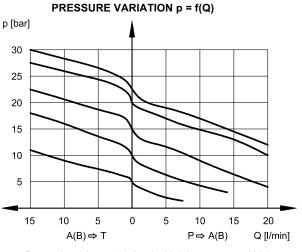

2 - CHARACTERISTIC CURVES

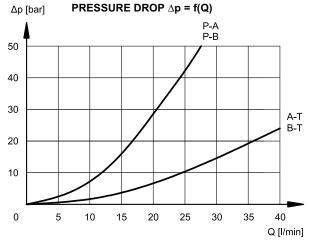

(values obtained with a ZDE3-D/30N-D24K1 PWM 100 Hz and oil with viscosity 36 cSt at 50°C)

Pressure regulation is 0.5 bar lower in versions SA and SB

3 - ELECTRICAL CHARACTERISTICS

Proportional solenoid

The proportional solenoid comprises two parts: tube and coil.

The tube, screwed to the valve body, contains the armature which is designed to maintain friction to a minimum thereby reducing hysteresis.

The coil is mounted on the tube secured by means of a lock nut and can be rotated through 360° depending on installation clearances.

NOMINAL VOLTAGE	V DC	12	24
RESISTANCE (at 20°C) K1 coil K7 coil	Ω	3.66 4	17.6 19
MAXIMUM CURRENT	А	1.88	0.86
DUTY CYCLE		10	0%
PWM FREQUENCY	Hz	200	100
ELECTROMAGNETIC COMPATIBILITY (EMC)	According to 2014/30/EU		
PROTECTION FROM: Atmospheric agents (IEC 60529)	IP65		
CLASS OF PROTECTION: Coil insulation (VDE 0580) Impregnation		class H class F	

4 - STEP RESPONSE

(with mineral oil with viscosity of 36 cSt at 50°C and electronic control card)

Step response is the time taken for the valve to reach 90% of the set pressure value following a step change of reference signal.

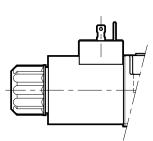

The table illustrates typical step response times measured with input flow rate of Q = 5 l/min and p = 50 bar.

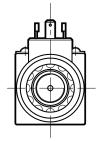

REFERENCE SIGNAL STEP	0 → 100%	100 → 0%
Step response [ms]	30	30

5 - ELECTRIC CONNECTIONS

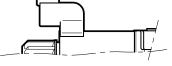

Connectors for standard K1 connection are always supplied with the valve.

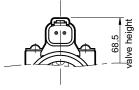

connection for EN 175301-803 (ex DIN 43650) connector code **K1** (standard)

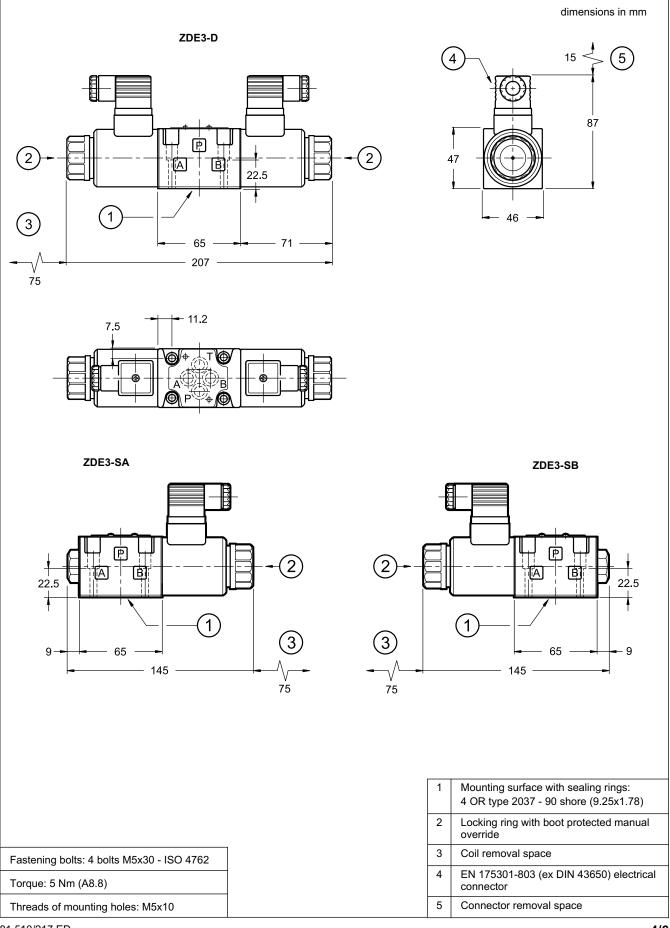

connection for DEUTSCH DT06-2S male connector code **K7**

6 - OVERALL AND MOUNTING DIMENSIONS

7 - MANUAL OVERRIDE

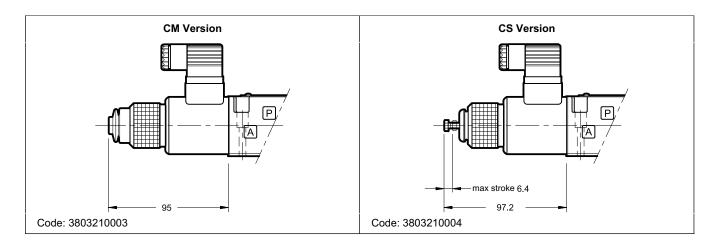

The standard valve has solenoids whose pin for the manual operation is integrated in the tube. The operation of this control must be executed with a suitable tool, minding not to damage the sliding surface.

Two different manual override version are available upon request:

- CM version, manual override belt protected

- CS version, screw override with metal ring nut, provided with a M4 screw and a blocking locknut to allow the continuous mechanical operation.

CAUTION!: The manual override use doesn't allow any proportional regulation; indeed using this kind of override, the main stage spool will open completely and the whole inlet pressure will pass through A or B line.

8 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other fluid types such as HFA, HFB, HFC, please consult our technical department. Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

9 - INSTALLATION

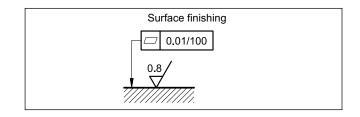

The ZDE3 valves can be installed in any position without impairing correct operation.

Ensure that there is no air in the hydraulic circuit.

Valves are fixed by means of screws or tie rods on a flat surface with planarity and roughness equal to or better than those indicated in the relative symbols. If minimum values are not observed fluid can easily leak between the valve and support surface.

Connect the valve T port directly to the tank. Add any backpressure value detected in the T line to the reduced pressure value.

Maximum admissible backpressure in the T line, under operational conditions, is 30 bar.
